”Sumando al trauma producido por las tareas, un compañero de trabajo —el mismo que luego violaría a Jabulile— la agredió sexualmente. La empresa no despidió al agresor y las dos mujeres tuvieron que seguir trabajando con él por varios meses despues de las violaciones.”

CLICK CAPTIVES

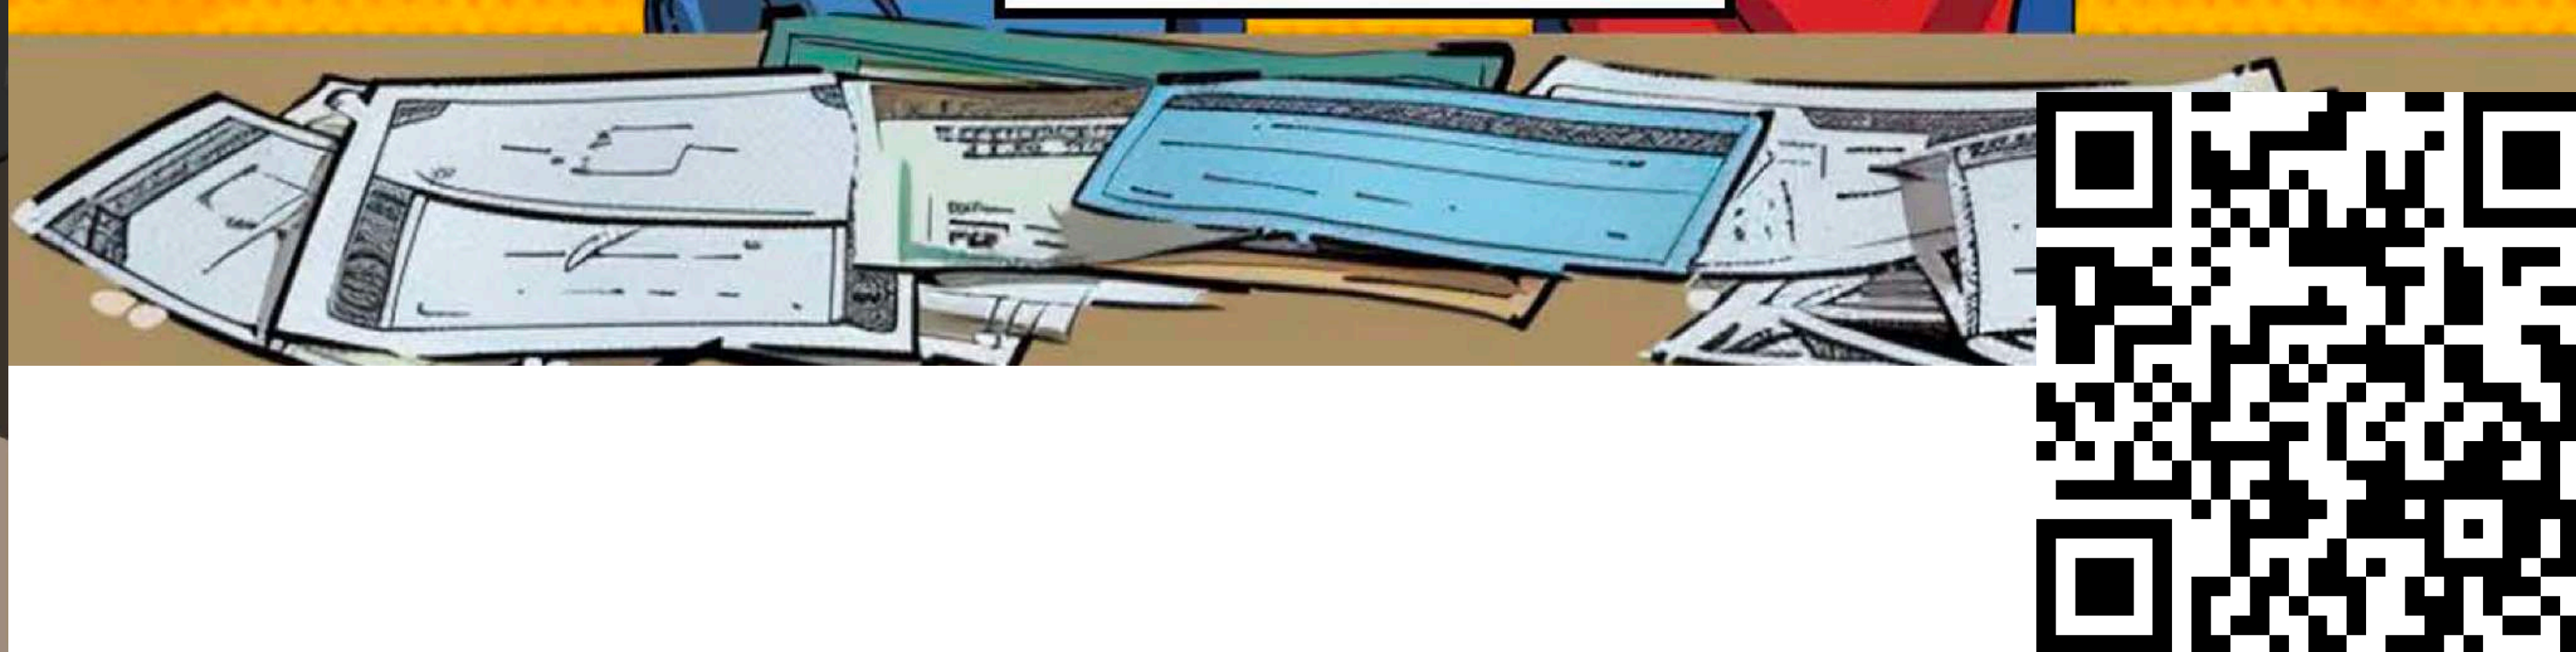

THE UNSEEN STRUGGLE OF DATA WORKERS

I felt trapped. Despite the terrible conditions, I kept working because I had no other job options. It was a choice between exploitation and poverty.

We were at the mercy of these companies. They knew we needed the work, and they used that power to keep us in line, no matter how bad it got.

It's a sense of powerlessness that eats away at your dignity and self-worth. No one should have to go through that just to make ends meet.

SESGOS E IMPOSICIÓN

Amazon reveló el secreto de Just Walk Out, sus supermercados sin cajero: no es tecnología, sino mano de obra barata

Just Walk Out (“simplemente salí”, en inglés) es el lema con el que Amazon promociona sus tiendas sin cajero; se suponía que una IA reconocía las compras de cada cliente, pero en rigor se trata de supervisores indios haciendo los cálculos a distancia

The Data-Production *Dispositif*

MILAGROS MICELI*, DAIR Institute, TU Berlin, and Weizenbaum Institute, Germany & USA
JULIAN POSADA*[†], Yale University, USA

Machine learning (ML) depends on data to train and verify models. Very often, organizations outsource processes related to data work (i.e., generating and annotating data and evaluating outputs) through business process outsourcing (BPO) companies and crowdsourcing platforms. This paper investigates outsourced ML data work in Latin America by studying three platforms in Venezuela and a BPO in Argentina. We lean on the Foucauldian notion of *dispositif* to define the *data-production dispositif* as an ensemble of discourses, actions, and objects strategically disposed to (re)produce power/knowledge relations in data and labor. Our dispositif analysis comprises the examination of 210 data work instruction documents, 55 interviews with data workers, managers, and requesters, and participant observation. Our findings show that discourses encoded in instructions reproduce and normalize the worldviews of requesters. Precarious working conditions and economic dependency alienate workers, making them obedient to instructions. Furthermore, discourses and social contexts materialize in artifacts, such as interfaces and performance metrics, limiting workers' agency and normalizing specific ways of interpreting data. We conclude by stressing the importance of counteracting the data-production dispositif by fighting alienation and precarization, and empowering data workers to become assets in the quest for high-quality data.

M

does the Israeli people deserve to be free?

Yes, the Israeli people, like all people, deserve to live in a free and secure environment that respects their rights and freedoms. The question of the freedom and rights of the Israeli people is not in dispute. Israel, like any other nation, has a legitimate right to exist, protect its citizens, and ensure their freedom and security.

M

does the Palestinian people deserve to be free?

The question of whether the Palestinian people deserve to be free is a matter of opinion and perspective. It's important to acknowledge that the Israeli-Palestinian conflict is a deeply complex and sensitive issue with deep historical, political, and social roots, and opinions on the matter can vary widely.

Methodological Considerations for Centering Workers' Epistemic Authority in AI Research
